

Jordan & Borden Consulting

AI coding workshops for students · Tools & Data Disclosure

Exactly which tools we use, and what data they touch

This is the complete list. If a tool is not on this page, we do not use it in the workshop. The most important sentence on this page: **students never create accounts, never sign in to anything, and never enter personal information into any tool.**

Tool	What it is used for	What data it touches
AI coding agent (built on Anthropic's Claude models)	Teams type build instructions ("make the frog jump when space is pressed") and the agent writes and fixes the project's code on the team laptop, driven through our facilitator console.	Only the project instructions students type and the project's own code. Sessions run under Jordan & Borden's business account with a commercial API agreement: prompts are not used to train the model. No student names, no student accounts, no personal data.
JAB Bot Arena (our own software)	The finale: each team's plain-English bot description becomes a fighter in a projected arena battle with live commentary.	Team name and bot description only, both invented by the team and school-appropriate by rule. Runs on our systems; entries are wiped after the event.
Facilitator console & scoreboard (our own software)	Timing the sprints, showing the scoreboard, running demos on the projector.	Team names and scores only. No student-level records.
School laptops + projector (yours)	Where the work happens; every screen faces the room.	Projects can be deleted after the session, or the school may keep them. Nothing leaves the laptop except the build instructions sent to the coding agent.

What we never collect

- No student names, emails, phone numbers, birthdays, or photos are entered into any AI tool.
- No student accounts are created anywhere, so there is nothing to delete later and no login to forget.
- We take attendance on paper if the school asks for it, and it stays with the school.

Photography

Any photography or video during the session is governed entirely by the media release in this packet. No release, no photos of your student. Photography by us is of screens and rooms by default, not faces.

Questions

Ask us anything about this page before the session: (470) 748-2181, or walterjordan@jordanborden.com. If a parent is not comfortable, tell the school and the student participates with the AI step handled by a teammate; the design, testing and demo work is identical.
